

Figure 1 is a scatter plot showing the monthly mean temperature (Temp in deg.C) for the 50db depth in the western North Pacific. The x-axis represents months from Jan to Dec. The y-axis represents temperature in degrees Celsius, ranging from 0.0 to 26.0. Data points are shown for each month, with error bars indicating the standard deviation. The temperature is near 0.0 in Jan and Jul, and increases to a peak of approximately 17.0 in Oct.

Figure 1 is a scatter plot showing the monthly mean temperature (deg.C) for the years 1999 and 2000. The y-axis represents temperature in degrees Celsius, ranging from 0.0 to 26.0. The x-axis represents the months of the year, from Jan to Dec. Data points are shown for 1999 (black dots) and 2000 (grey dots). Error bars represent standard deviation. The plot shows that temperatures in 2000 were generally higher than in 1999, especially in the summer months.

Figure 1 is a scatter plot showing the monthly mean temperature (deg.C) for the years 1999 and 2000. The x-axis represents months from Jan to Dec. The y-axis represents temperature in degrees Celsius, ranging from 0.0 to 26.0. Data points are shown for each month, with error bars indicating variability. The temperatures are generally low (below 10.0 deg.C) from Jan to Jun, and then increase significantly (above 10.0 deg.C) from Jul to Dec.
